Philips HeartStart OnSite Benefits

- Great value (one of the most affordable AEDs on the market with an eight year warranty).
- Easy for non-professionals to use (can also be used for training with special AED pads).
- Very compact with a lightweight design.

Philips HeartStart OnSite Features

When you see a product that's made by Philips, you know it has been crafted by one of the leaders in the industry. Philips HeartStart OnSite defibrillator has all of the best features Philips HeartStart AEDs have to offer—at a competitive price.

Compact and Lightweight

At just over 3 lbs. with physical dimensions of 2.8" x 7.4" x 8.3", the Philips HeartStart OnSite defibrillator is one of the lightest weight and most compact AEDs on the market. If you need an AED that can be frequently moved from location to location, like sporting events, this may be the defibrillator for you. While it doesn't have the highest rating for dust and water resistance, you may want to purchase a carrying case if you think it will be exposed to these elements.

Zoll AED Plus – Benefits

- Durable and Dependable (one of the toughest AED devices available, backed by a seven-year warranty).
- Easy for non-professionals to use with clear audio/visual support.
- Low Maintenance Cost (5 year battery life & 5 year AED pad life).

Zoll AED Plus – Rugged and Durable

If you work with student athletes, law enforcement, or are involved with any other outdoor activities such as operating a golf course, you will want to make sure your AED is up for the challenge. You can plan on your AED seeing some abuse when being toted around outside, and you will want it to last. The Zoll AED Plus has one of the highest IP ratings when compared to similar AED devices available, which means you really can't find a better device for your use. Carrying a rating of IP55 means that it scores very well for dust and water protection. IP stands for ingress protection, and the first number represents its score for dust protection (5 out of a possible 6). The second number represents its protection from water (5 out of a possible 8). This Zoll Defibrillator can stand up to quite a bit of abuse when compared to the average portable AED device.

The Zoll AED Pro is designed for both basic life support and advanced life support professionals. Both of these Zoll defibrillators feature a feedback device known as "Real CPR Help®," which the emergency responders use to see and hear their cardiopulmonary resuscitation (CPR) efforts and help them to adjust their efforts accordingly. The Zoll AED Pro also features "See Thru CPR®," which allows the rescuer to see the patient's cardiac rhythm during resuscitation. This eliminates the need to stop the CPR to see if the defibrillation action was successful, thereby saving time and increasing the chances of the victim surviving the SCA.

HeartSine Samaritan PAD AED

\$1,175.00

Compact, easy to use, lifesaving technology.

Designed for the lay responder, the HeartSine samaritan PAD AED is lightweight and simple to use. A great compliment to an AED program for the workplace, school, or manufacturing facility.

- The smallest and lightest AED available (2.4 lbs)
- Highest durability ratings of any AED available (IP56 Dust & Water Rating, Military Standard Drop Test)

What's Included:

- 8-Year Warranty
- PAD PAK AED Pads & Battery
- Carry Case
- HeartSine Saver EVO Software
- Designed specifically for public, non-medically-trained personnel use, the HeartSine AED is perfectly suited for every public gathering place, including [schools](#), health clubs, [gyms](#), fitness centers, [office buildings](#), apartment complexes, airports and homes, because you never know when a heart attack or SCA caused by an arrhythmia can happen. With simple, easy-to-use controls and a clear display, the HeartSine AED defibrillator can be used by nearly anyone.

HeartSine Samaritan AED Features

Sudden cardiac arrest (SCA) can happen to anyone, at any time and in any place. It can affect not only older people but children, teenagers and young adults, as well. Emergency medical services need to be performed within minutes of SCA or the victim will die. In the case of sudden cardiac arrest, every minute really does count. If resuscitation and ventricular fibrillation are not performed within five minutes, brain damage can occur. If an AED is not available and is not used within ten minutes, most sudden cardiac arrest victims die. The HeartSine Samaritan PAD can help prevent this tragedy from occurring, and was designed so that non-medical personnel can use it easily and quickly.
